

# Sheringham Shoal Offshore Wind Farm

---

## Suppliers' Directory

## Welcome to the Suppliers' Directory

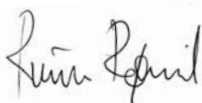

**As developers of the Sheringham Shoal Offshore Wind Farm, Scira Offshore Energy has seen it as part of our role to encourage the involvement of local North Norfolk companies in both the construction and longer-term operation and maintenance of the wind farm. This Directory is one step in that direction, its main purposes being:**

- to enable local suppliers to make contact with the main project contractors to promote their products and services
- to provide the main contractors with a quick and easy reference guide for relevant products and services available in North Norfolk

Scira Offshore Energy is grateful to the team at the North Norfolk Business Forum (NNBF) for its considerable effort to coordinate the development of this first issue of the Directory.

Any businesses which missed the production deadline for this issue should contact NNBF on T: 01263 510709 or E: [info@nnbf.org](mailto:info@nnbf.org) to ensure that their details can be included in any future editions.

I am sure this will prove to be a very useful and much used publication.

**Rune Rønvik**

*Project Director*

*Sheringham Shoal Offshore Wind Farm*

# Sheringham Shoal

## *Powering future generations.....*

The world needs more energy, and in future ever more of its energy supply will need to be obtained from renewable resources such as hydropower, waves and wind. With around 40% of the EU's entire wind resources available in British waters, it makes sense to exploit the wind.

The Sheringham Shoal Offshore Wind Farm, being developed by Scira Offshore Energy, which is jointly owned by StatoilHydro and Statkraft, will be one of Britain's largest offshore wind farms.

It will be built around 20 kilometres due north from the coastal town of Sheringham in North Norfolk and will comprise 88 wind turbines in an area of 35 square kilometres. When fully operational in late 2011, this wind farm will generate 1.1TWh of green electricity every year, which is roughly equivalent to the annual consumption of around 220,000 British homes.

## About the partners:

**StatoilHydro** is an integrated technology-based international energy company primarily focused on upstream oil and gas operations. Headquartered in Norway, the company has more than 30 years of experience from the Norwegian continental shelf, pioneering complex offshore projects under the toughest conditions. The company's culture is founded on strong values and a high ethical standard. The aim is to deliver long- term growth and continue to develop technologies and manage projects that will meet the world's energy and climate challenges in a sustainable way. StatoilHydro is listed on NYSE and Oslo Stock Exchange. [www.statoilhydro.com](http://www.statoilhydro.com)

**Statkraft** is Europe's largest generator of renewable energy, with a total installed capacity of more than 14,800 MW. The company develops and generates hydropower, wind power, gas power, solar power and district heating, and is a major player on the European energy exchanges. Statkraft opened its first wind farm in 2002 and now owns and operates three onshore wind farms in Norway with a total installed capacity of 244 MW. In the UK, Statkraft has one hydropower plant in operation in Wales, one wind farm under construction in Wales and planning consent for another in Scotland. The company has around 3000 staff in more than 20 countries, and is wholly owned by the Norwegian state. [www.statkraft.com](http://www.statkraft.com)
